

Addendum E – PentaPet Species Affinity Framework

Design Philosophy

PentaPets are the foundation of the Ether Fantasy ecosystem.

They are not merely collectible creatures or combat companions. They are the living population of the world and unify every Ether Fantasy game mode.

A single PentaPet may:

- Be discovered or captured in **EF Hunt**
- Be trained and specialized within a kingdom
- Work as part of the kingdom economy
- Join armies in **Clash Front**
- Fight in **EF MOBA**
- Continue progressing throughout its lifetime

This creates one persistent creature ecosystem shared across every game.

Design Principles

Species Define Talent

Species determine natural aptitude.

They **do not** permanently restrict occupations.

Every PentaPet can perform every task, but each species naturally excels in different professions.

This avoids "dead" species while creating meaningful economic specialization.

Experience Defines Mastery

Species provides an initial advantage.

Experience determines long-term excellence.

Example:

An Earth-type begins as an excellent miner.

A Grass-type may eventually become a Master Miner after years of experience, but it requires greater investment.

This rewards long-term progression while maintaining species identity.

Productivity Formula

Every task uses a common productivity model.

Productivity = Base Skill × Experience × Species Affinity × Morale × Equipment

This framework is shared across:

- Mining
 - Farming
 - Crafting
 - Construction
 - Research
 - Transport
 - Military
 - Exploration
-

Species Affinity

Earth

Civilian

- Mining
- Quarrying
- Construction
- Masonry
- Excavation
- Terraforming

Military

- Heavy Infantry
- Shield Units
- Defensive Engineers
- Fortress Builders

Economy

- Stone
- Clay
- Iron

- Granite
 - Mountain Infrastructure
-

Fire

Civilian

- Blacksmithing
- Smelting
- Glass Making
- Metal Refining
- Weapon Crafting

Military

- Siege Engineers
- Assault Units
- Artillery Specialists

Economy

- Weapons
 - Armor
 - Industrial Production
-

Water

Civilian

- Fishing
- Irrigation
- Harbor Operations
- Navigation
- Water Mills

Military

- Naval Crew
- Marines
- River Logistics

Economy

- Shipping
 - Trade
 - Fisheries
-

Grass

Civilian

- Farming
- Forestry
- Herbalism
- Ranching
- Orchard Management

Military

- Medical Support
- Supply Corps

Economy

- Food
 - Timber
 - Medicine
 - Population Growth
-

Electric

Civilian

- Workshops
- Machinery
- Automation
- Magical Infrastructure
- Research

Military

- Battlefield Support
- Arcane Engineering

Economy

- Technology
 - Advanced Crafting
 - Automation
-

Wind

Civilian

- Couriers
- Scouts

- Caravan Leaders
- Exploration
- Messengers

Military

- Reconnaissance
- Fast Cavalry
- Ambush Specialists

Economy

- Transport
 - Trade Routes
 - Logistics
-

Future Species

Additional elemental families such as Ice, Light, Dark, Dragon, or other rare lineages may introduce specialized occupations and kingdom bonuses without changing the underlying framework.

Workforce Simulation

PentaPets replace abstract population.

Instead of displaying:

Population = 10,000

The simulation tracks actual workforce composition.

Example:

- 320 Farmers
- 85 Miners
- 40 Builders
- 60 Merchants
- 25 Blacksmiths
- 90 Guards

These are actual PentaPets with identities, professions, experience, morale, and specialization.

War, migration, recruitment, and disasters directly affect the available workforce.

AI Workforce Management

Players should not manually assign every worker.

Instead, Governors configure strategic priorities.

Example:

- Agriculture: 40%
- Mining: 20%
- Construction: 15%
- Military: 15%
- Crafting: 10%

The Governor AI automatically assigns the most suitable available PentaPets based on:

- Species Affinity
 - Experience
 - Current Morale
 - Equipment
 - Kingdom Priorities
-

Equipment

Equipment improves productivity rather than replacing specialization.

Examples include:

- Mining Picks
- Blacksmith Tools
- Farming Implements
- Construction Equipment
- Merchant Wagons
- Navigation Instruments

Equipment multiplies the effectiveness of experienced specialists.

Happiness & Occupation

PentaPets are happier when working within their natural affinity.

Examples:

- Earth-type Mining
- Grass-type Farming
- Fire-type Blacksmithing

Working outside preferred occupations is still possible but may reduce long-term happiness and efficiency.

Kingdom Identity

As kingdoms develop, their dominant PentaPet species influence both gameplay and visual identity.

Examples:

Earth Kingdom

- Massive stone fortifications
- Heavy infantry
- Rich mining economy

Grass Kingdom

- Fertile farmland
- Forestry
- Herbal medicine
- Population growth

Water Kingdom

- Ports
- Fishing
- Maritime trade
- Naval dominance

Fire Kingdom

- Industrial production
- Weapons
- Armor
- Siege engineering

Over time, kingdoms become visually and economically distinct based on their workforce composition.

Ecosystem Integration

EF Mobile

Introduces players to different PentaPet species and their natural strengths.

EF Hunt

Players discover, capture, breed, and develop new PentaPets.

Rare species become valuable workforce and military assets.

EF MOBA

PentaPets appear as heroes, companions, summons, and battlefield units.

Player skill determines victory rather than permanent character power.

Clash Front

PentaPets become the living workforce that powers every kingdom.

They mine resources, grow food, construct cities, transport goods, defend settlements, and fight wars.

This creates one unified ecosystem where every creature has persistent value across every Ether Fantasy experience.

Long-Term Vision

PentaPets should become one of the defining innovations of Ether Fantasy.

Rather than separating pets, NPCs, workers, soldiers, and population into different systems, every living creature belongs to a single persistent simulation.

As players progress through the ecosystem, the same PentaPets naturally transition between exploration, economy, warfare, and civilization-building, making the entire world feel cohesive, alive, and difficult to replicate.
